DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Mohara et al USPN 5,342,474.

(Re claim 1) "a tape feeding system with a drive source ... being adjustable for a plurality of pitches" (figure 7). "a suppressor formed with an opening" (1 figure 11). "a control device setting a feed stop position ... closer to an edge ... smaller then a pre determined size" (figure 15-18).

(Re claim 2) "a shutter ... configured to open when the electronic component is picked" (126 figures 10 and 11).

(Re claim 3) "Control device is configured to set the feed stop position by using a head electronic component". This is performed by the operator to set the position of the control device.

(Re claim 4) "the control device sets the feed position at the center of the opening when the electronic component is larger than the predetermined size" (figure 13).

Application/Control Number: 10/806,465

Art Unit: 3651

(Re claim 5) "opening is configured so that the electronic component is picked up by a suction nozzle" (13 figure 7).

Claim Rejections - 35 USC § 103

Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mohara in view of Amao et al. USPN 4,951,383.

Mohara discloses the dispenser claimed in claim 1, as well as the operator setting the positioning.

Mohara does not disclose the aid of a recognition camera in the positioning process

Amao et al. teaches the use of a recognition camera to aid or automate the position adjustment for parts pick up.

It would be obvious to one skilled in the art to modify Mohara to include a recognition camera because it would allow for closer insepection of components to allow for automatic adjustment or to aid the operator in adjusting the feed stop position.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy R. Waggoner whose telephone number is (571) 272-8204. The examiner can normally be reached on Mon-Thu 8am-2pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene Crawford can be reached on (571) 272-6911. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
